Summary

Motivated Computer Science and Engineering student with a strong interest in Artificial Intelligence, Cybersecurity, and Cloud Computing. Excited by the opportunity to grow in a collaborative environment, and eager to understand how modern development practices are applied to solve real-world business challenges.

Skills

Technical Skills:

- Python, C, Java
- Cybersecurity, Internet of Things(IoT), Cryptography
- MySQL, Git, VS Code, Arduino

Soft Skills:

- Teamwork, Communication
- Adaptability, Continuous Learning
- Time Management, Critical Thinking

Languages:

- English, Malayalam

Projects

DAPSAKA (Decentralized Lightweight IoT Authentication Protocol) – A decentralized security protocol and monitoring dashboard created for Internet of Things (IoT) ecosystems. The primary goal of the project is to allow smart sensors to communicate directly and securely with a local console without relying on an external cloud server. It focuses on establishing mutual trust and keeping local environmental data completely private. The accompanying dashboard provides an intuitive interface to monitor sensor readings while simultaneously tracking the health and integrity of the secure connection.

Personalized Health & Diet Planner – A personalized mobile application developed using Flutter for the user interface and Python for backend logic. The application provides customized fitness and nutritional recommendations. It focuses on delivering tailored meal planning and health tracking to suit individual user preferences, demonstrating a practical integration of front-end mobile design with back-end data processing

AuraSense (Smart IoT Environmental & Air Quality Monitor) – An IoT-based environmental monitoring framework designed to collect and process real-time air quality data. The project features a 3D visualization interface that allows users to easily interpret complex environmental metrics. The primary goal was to bridge the gap between raw hardware sensor data and a user-friendly software dashboard, demonstrating how data flows from physical devices to a visual interface.

Education

B.Tech, Computer Science and Engineering, MBCET, Kerala

2023 – 2027

CGPA: 8.04 / 10

United Indian School, Kuwait (CBSE)

12th (2023): 83.8%

10th (2021): 92.6%

Internship

SRAI Smart Solutions Pvt Ltd | Cyber Security

Completed a 2-week internship(16/06/2025 - 29/06/2025) in Cyber Security and Ethical Hacking at SRAI Smart Solutions Pvt Ltd, Thiruvananthapuram. Gained practical exposure to cyber security concepts, ethical hacking techniques, network security, vulnerability assessment, and information security practices. Participated in hands-on activities, enhancing analytical, problem-solving, and teamwork skills while learning industry-standard security methodologies.

Certifications

- Soft Skills Development – NPTEL (IIT Kharagpur)
- Generative AI Foundations - AWS Academy
